

Meltabs is For the Common Men

Impotence or Erectile Dysfunction can be caused due to physical or psychological factors or maybe both. It is estimated that about 150 million people suffer from Erectile Dysfunction and about 90% of the same do not seek treatment. Meltabs or Generic Cialis is a very powerful anti-impotence drug.

The erection process involves a sequence of events within the body involving brain, spinal column, veins and arteries in the penis. Erection will not be possible, if this process gets disrupted at any stage. Any kind of damage to nerves, arteries, smooth muscles due to diseases like diabetes, neurological disease, kidney disease, etc. can also result in Erectile Dysfunction.

Meltabs (Generic Cialis) is a cheaper option for people suffering from Erectile Dysfunction and for them who can not spend their hard-earned money on buying expensive drugs. Meltabs is more suited for the common man.

The Generic Cialis-Meltabs primarily contains the same active ingredients 'Tadalafil' as the brand drug. Meltabs (Generic Cialis) has been approved for the management of Erectile Dysfunction. This ED pill is used to enhance sexual activity allowing men to gain erections faster and longer.

The most exciting thing about Meltabs is that it is effective for 36 hours unlike other ordinary pills which stay effective only for four hours. That's why Meltabs is also called as 'Weekend pill' .

The most commonly reported side effects with Meltabs are headache, upset stomach, flushing or muscle ache. Ideally Meltabs should be taken only once a day and men should discuss their medical conditions and all medications they are presently taking with their doctors to ensure that Meltabs is right for them and that they are having healthy enough sexual activity.
