

ED as a curse to sex life

Erectile Dysfunction is the inability to attain or maintain an erection of the penis sufficient for sexual pleasure. Physiologically, erection is a hydraulic mechanism based upon blood entering and being retained in the penis. Reduced blood flow to the penis and nerve damage are the most common physical causes of Erectile Dysfunction. Kamagra, Sildenafil and Generic Viagra are the medications that come under the category of generic Viagra. These medications allow enough blood flow into the penis by enlarging its arteries. And they also block the retrieving passage. Hence with more blood flowing inside and less flowing out, the penis gets a stiff erection.

Kamagra, Sildenafil and Generic Viagra are the medications to be taken orally. One has to take any of them 30 minutes before the intercourse and must have to get sexually aroused. Because all these medications don't result in an erection if one is not sexually stimulated after consuming.

Like all other medications, these medicines (Kamagra, Generic Viagra, Sildenafil) too have some side effects. The most possible side effects of these drugs are Headache, Diarrhea, Dizziness, Stomach upset and Flushing. But all these side effects are mild in nature. So they disappear after a short period of time.

Kamagra, Sildenafil and Generic Viagra meet the strictest manufacturing guidelines. It is the finest assurance one can ask for while using a drug. So don't walk away from it considering it as fake. Be smart and save your money which you can do by opting for these economic drugs instead of expensive branded drugs.

You have to take some precautions while consuming Kamagra, Sildenafil or Generic Viagra. First, you have to let your doctor know your medical history particularly your allergies, penis conditions, anemia, eye problems, blood system cancers, high or low blood pressure, etc. You will have to get up slowly while rising from a seated or lying position in order to avoid dizziness. Alcohol intake will increase the side effects of the drug. Therefore limit it if possible. Elderly people may be more sensitive to the side effects of the drug. So they should strictly follow all the guidelines of the doctor while consuming the drugs.

Kamagra, Sildenafil and Generic Viagra all are doing exceptionally well in the market in recent times. They have become quite popular amongst ED patients. And why shouldn't it happen? They have satisfied the sexual urge of millions. So they deserve it. Well, don't you think so?
